

STONETECH[®]

Stone, Tile & Grout Care Solutions

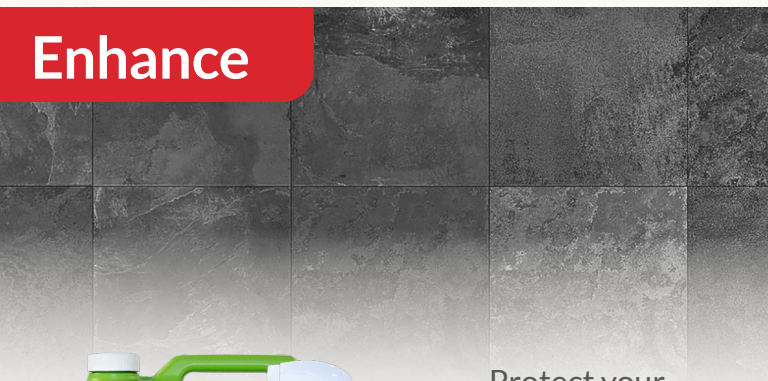

Clean

Protect

Enhance

Protect your
investment
and preserve
the beauty of
your surface

Protect your investment for years to come with STONETECH® surface care products.

STONETECH surface care solutions deliver the professional-grade performance people trust—now designed without PFAS and formulated with advanced water-based technologies. These upgraded formulations meet evolving expectations while maintaining the durability, usability, and application quality professionals rely on. With improved suitability for indoor use and select products featuring antimicrobial technology^s, STONETECH helps keep tile and stone surfaces protected, fresh, and looking their best with confidence.

Clean

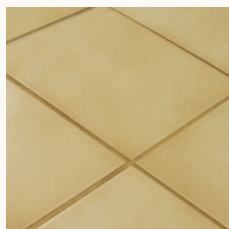

Formulated for cleaning stone, tile and grout.

Many all-purpose cleaners are too acidic or alkaline—damaging sealers, leaving stone vulnerable to stains, and even etching delicate surfaces. STONETECH® cleaners are specially formulated to care for stone, tile, and grout without compromise. The complete line includes gentle options for daily use and powerful solutions for tougher messes. Ideal for everyday cleaning and resealing, these products feature built-in antimicrobial properties to protect the treated surface by resisting deterioration from mold and mildew and helping control odor-causing effects. Designed without PFAS*, water-based, and low in VOCs, they're designed with both environmental responsibility and indoor air quality in mind.

Protect

**NEW &
IMPROVED**

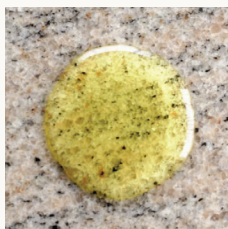

Protect your investment from stains.

Without proper protection, porous surfaces are vulnerable to staining from common oil- and water-based liquids. STONETECH® designed without PFAS*, water-based penetrating sealers help prevent unsightly stains and keep stone, tile, grout, and masonry looking newer for longer—without altering the surface. For enhanced performance, choose from sealers tailored to specific applications, offering maximum protection even on the most porous materials, indoors or out.

Enhance

Restore luster and enhance stone's natural beauty.

STONETECH® Enhancer Pro™ Sealer brings out deeper, richer color while providing long-lasting protection. This premium, designed without PFAS*, water-based formula offers maximum stain and color protection without altering the stone's finish. UV-stable and professional-grade, it's perfect for both interior and exterior use, reviving worn surfaces and enhancing the natural character of stone floors and other surfaces.

Care and maintenance tips

Prevent spills from staining

Stone, tile and grout can vary in porosity. Common food and beverage spills can absorb into the surface and leave permanent stains. Prevent stains using a sealer such as STONETECH® BulletProof Sealer which provides maximum stain protection on the most porous surfaces. Coasters, trivets, rugs and mats are always recommended.

Use cleaners made for stone

Avoid using all-purpose cleaners not specifically designed for stone. Some all-purpose cleaners (i.e. bathroom, grout and tub cleaners) may contain acid (vinegar) or alkaline (bleach or ammonia). STONETECH Stone & Tile Cleaner is pH neutral and specifically formulated to properly clean stone, tile and grout.

Consider a cleaner & protector

For heavily used countertops or dense stones, a 2-in-1 cleaner & sealer such as STONETECH Revitalizer™ Cleaner & Protector is a great option. It cleans everyday messes, reseals to reinforce stain protection, and continuously defends against the growth of bacteria, mold, and mildew.

Bath & shower maintenance

Mineral deposits, soap scum, mold, and mildew can quickly accumulate in wet areas like baths and showers. To help prevent buildup, clean regularly with STONETECH Stone & Tile Cleaner or STONETECH Revitalizer Cleaner & Protector. After each use, wipe surfaces with a squeegee or dry cloth to reduce residue.

* Formulated without intentionally added PFAS, including PFOA or PFOS.

Answers to common questions

Why 'designed without PFAS'?

STONETECH sealers and cleaners are formulated using water-based technologies designed without intentionally added PFAS* while maintaining the same trusted performance. These products have been upgraded to meet evolving regulatory expectations without compromising durability, usability, or application quality. The low-VOC, water-based formulas are easy to apply, suitable for indoor use, and free from restrictions commonly associated with solvent-based products.

Why does my granite stain?

Granite is like any other natural stone—it can be porous and absorbent. Stone that has swirls and/or veins, or granite with smaller-sized crystals, tends to be more absorbent and more likely to stain.

Why should I seal my natural stone, tile and grout?

Protected surfaces will be easier to clean, less likely to stain and help to preserve your surface for years to come.

How can I tell if my stone has already been sealed?

Simply apply a drop of water at least ½" (13 mm) in diameter to the top of the stone and let it stand for at least 5 minutes. If, after 5 minutes, the stone does not darken, then your stone has most likely been sealed.

Is one coat of sealer enough for natural stone?

When sealing dense stone, one coat should be sufficient. Most stone and grout, however will require at least two coats of sealer.

Will STONETECH® sealers change the look of my countertop?

STONETECH natural-look penetrating sealers, identified by their yellow labels, create an invisible shield in the stone that protect against stains without darkening or changing the stone's appearance. STONETECH enhancing sealers, however, deepen the color, seal the stone and are clearly marked with a red label.

What is antimicrobial product protection?

Select STONETECH products contain antimicrobial[§] agents that protect the product from the growth of odor-causing bacteria, mold, and mildew.

§ Antimicrobial technology is not designed to protect users against disease-causing microorganisms. Normal cleaning practices should be maintained.
